Praktikum 1 - Layouting AdminLTE

1. Download AdminLTE v3.2.0 dari situs resmi: [AdminLTE](https://adminlte.io/) (rilis 8 Februari 2022).
2. Ekstrak file yang telah diunduh ke folder PWL_POS/public, lalu rename folder menjadi adminlte.
3. Buka browser dan akses http://localhost/PWL_POS/public/adminlte untuk melihat tampilan template.

4. Klik menu Extras > Blank Page, halaman ini akan digunakan sebagai dasar web template.
5. Klik kanan pada halaman Blank Page dan pilih View Page Source.
6. Copy source code halaman tersebut dan paste ke file PWL_POS/resources/views/layouts/template.blade.php (buat folder layouts jika belum ada).
7. Pisahkan layout menjadi beberapa file di resources/views/layouts/:
 - Modifikasi 1-14 pada template.blade.php

```

Praktikum 2 - Penerapan Layouting

1. Buat WelcomeController.php untuk mengatur tampilan awal.

```
<?php

namespace App\Http\Controllers;

use Illuminate\Http\Request;

3 references | 0 implementations
class WelcomeController extends Controller
{
    0 references | 0 overrides
    public function index(): Factory|View
    {
        $breadcrumb = (object) [
            'title' => 'Selamat Datang',
            'list' => ['Home', 'Welcome']
        ];

        $activeMenu = 'dashboard';

        return view(view: 'welcome', data: ['breadcrumb' => $breadcrumb, 'activeMenu' => $activeMenu]);
    }
}
```

2. Buat file resources/views/welcome.blade.php dan extend dari template.blade.php.

```
1 | @extends('layouts.template')
2 |
3 | @section('content')
4 |
5 |     <div class="card">
6 |         <div class="card-header">
7 |             <h3 class="card-title">Halo, apakabar!!!</h3>
8 |             <div class="card-tools"></div>
9 |         </div>
10 |         <div class="card-body">
11 |             Selamat datang guys, ini adalah halaman utama dari aplikasi ini.
12 |         </div>
13 |     </div>
14 |
15 | @endsection
```

3. Modifikasi breadcrumb.blade.php dan sidebar.blade.php untuk menyesuaikan tampilan.

- breadcrumb.blade.php

```
1 <section class="content-header">
2 <div class="container-fluid">
3 <div class="row mb-2">
4 <div class="col-sm-6"><h1>{{ $breadcrumb -> title }}</h1></div>
5 <div class="col-sm-6">
6 <ol class="breadcrumb float-sm-right">
7 @foreach ( $breadcrumb -> list as $key => $value )
8 @if ($key == count(value: $breadcrumb -> list) - 1)
9 <li class="breadcrumb-item active">{{ $value }}</li>
10 @else
11 <li class="breadcrumb-item">{{ $value }}</li>
12 @endif
13 @endforeach
14 <li class="breadcrumb-item"><a href="#">Home</a></li>
15 <li class="breadcrumb-item active">Blank Page</li>
16 </ol>
17 </div>
18 </div>
19 </div>
20 </section>
```

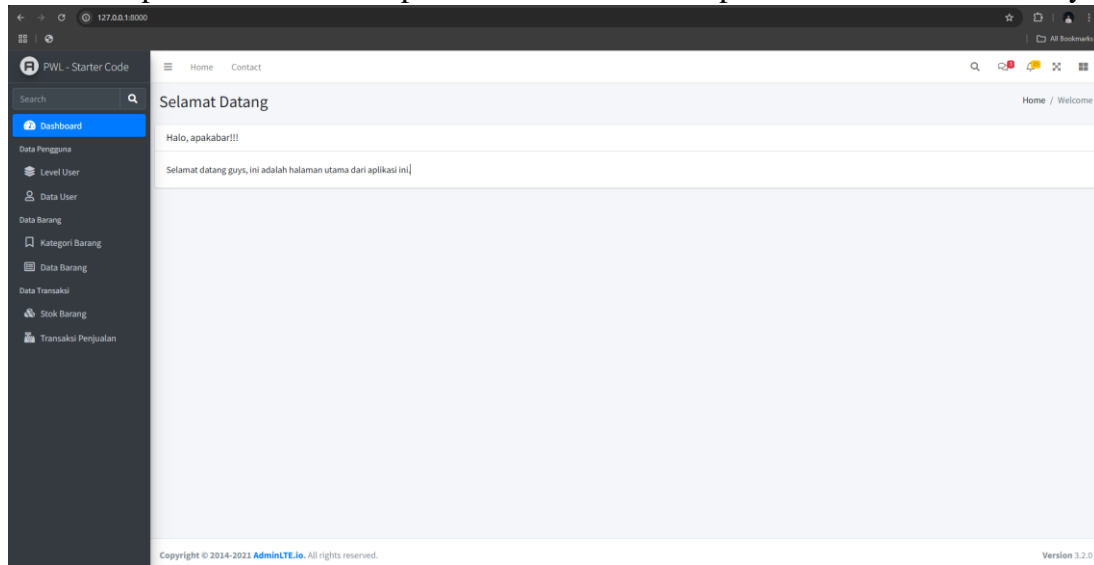

- sidebar.blade.php

```
<div class="sidebar">
  <!-- SidebarSearch Form -->

4. Tambahkan route di web.php untuk menghubungkan controller dengan view.

```
// Welcome
Route::get('/', [WelcomeController::class, 'index']);
```

5. Jalankan aplikasi dan akses http://localhost/PWL_POS/public untuk melihat hasilnya.

6. Commit dan push perubahan ke GitHub.

Praktikum 3 – Implementasi jQuery Datatable di AdminLTE

2. Modifikasi web.php

```
// User
Route::group(['prefix' => 'user'], function () { void {
    Route::get('/', [UserController::class, 'index']); // menampilkan halaman awal user
    Route::post('/list', [UserController::class, 'list']); // menampilkan data user dalam bentuk json untuk datatables
    Route::get('/create', [UserController::class, 'create']); // menampilkan halaman form tambah user
    Route::post('/', [UserController::class, 'store']); // menyimpan data user baru
    Route::get('/{id}', [UserController::class, 'show']); // menampilkan detail user
    Route::get('/{id}/edit', [UserController::class, 'edit']); // menampilkan halaman form edit user
    Route::put('/{id}', [UserController::class, 'update']); // menyimpan perubahan data user
    Route::delete('/{id}', [UserController::class, 'destroy']); // menghapus data user
});}
```

3. Buat atau modifikasi UserController.php untuk menangani CRUD data user.

```
<?php

namespace App\Http\Controllers;

use App\Models\UserModel;
use Illuminate\Http\Request;
use Illuminate\Support\Facades\Hash;

33 references | 0 implementations
class UserController extends Controller
{
    5 references | 0 overrides

            'list' => ['Home', 'User']
        ];

        $page = (object) [
            'title' => 'Daftar user yang terdaftar dalam sistem',
        ];

        $activeMenu = 'user';

        return view('user.index', data: ['breadcrumb' => $breadcrumb, 'page' => $page, 'activeMenu' => $activeMenu]);
    }
}
```

4. Buat view resources/views/user/index.blade.php yang menggunakan DataTables.

```

7. Jalankan aplikasi, akses http://localhost/PWL_POS/public/user dan amati hasilnya.

- Modifikasi UserController.php, Buat view resources/views/user/create.blade.php untuk menampilkan form tambah user, menambahkan fungsi store().

```

public function create(): Factory\View
{
    $breadcrumb = (object) [
        'title' => 'Tambah User',
        'list' => ['Home', 'User', 'Tambah']
    ];

    $page = (object) [
        'title' => 'Tambah user baru'
    ];

    $level = LevelModel::all(); // ambil data level untuk ditampilkan di form
    $activeMenu = 'user'; // set menu yang sedang aktif

    return view(view: 'user.create', data: [
        'breadcrumb' => $breadcrumb,
        'page' => $page,
        'level' => $level,
        'activeMenu' => $activeMenu
    ]);
}

public function store(Request $request): mixed|RedirectResponse
{
    $request->validate([
        // username harus diisi, berupa string, minimal 3 karakter, dan bernilai unik di tabel m_user kolom username
        'username' => 'required|string|min:3|unique:m_user,username',

        'password' => bcrypt(value: $request->password), // password dienkripsi sebelum disimpan
        'level_id' => $request->level_id
    ]);
}

```

akan muncul notifikasi data user berhasil disimpan, dan data yang sebelumnya kita tambahkan akan ditampilkan.

9. Buat/modifikasi fungsi show() pada UserController.php, Buat view resources/views/user/show.blade.php untuk menampilkan detail user,

```
public function show(string $id): Factory|View
{
    $user = UserModel::with('level')->find($id);

    $breadcrumb = (object) [
        'title' => 'Detail User',
        'list' => ['Home', 'User', 'Detail']
    ];

    $page = (object) [
        'title' => 'Detail user'
    ];

    $activeMenu = 'user'; // set menu yang sedang aktif

    return view('user.show', data: [
        'breadcrumb' => $breadcrumb,
        'page' => $page,
        'user' => $user,
        'activeMenu' => $activeMenu
    ]);
}
```

```

10. Buat fungsi edit() dan update() pada UserController.php, Buat view resources/views/user/edit.blade.php untuk menampilkan form edit user,

```

public function edit(string $id): Factory|View
{
    $user = UserModel::find($id);
    $level = LevelModel::all();

        'level' => $level,
        'activeMenu' => $activeMenu

}

public function update(Request $request, string $id): mixed|RedirectResponse

Praktikum 4 – Implementasi Filtering Datatables

1. Modifikasi index() di UserController.php untuk menambahkan kategori untuk data filtering.

```
$level = LevelModel::all();  
  
return view('user.index', data: ['breadcrumb' => $breadcrumb, 'page' => $page, 'level' => $level, 'activeMenu' => $activeMenu])
```

2. modifikasi view untuk menampilkan data filtering

```
<div class="row">  
  <div class="col-md-12">  
    <div class="form-group row">  
      <label class="col-1 control-label col-form-label">Filter:</label>  
      <div class="col-3">  
        <select class="form-control" id="level_id" name="level_id" required>  
          <option value="">- Semua -</option>  
          @foreach ($level as $item)  
            <option value="{{ $item->level_id }}">{{ $item->level_nama }}</option>  
          @endforeach  
        </select>  
        <small class="form-text text-muted">Level Pengguna</small>  
      </div>  
    </div>  
  </div>  
</div>  
<table class="table table-bordered table-striped table-hover table-sm" id="table_user">
```

3. deklarasi ajax di datatable

```
"type": "POST"  
"data": function (d) {  
  d.level_id = $('#level_id').val();  
}
```

4. edit pada bagian akhir script `@push('js')` untuk menambahkan listener jika data filtering dipilih

```
});
$('#level_id').on('change', function () {
    dataUser.ajax.reload();
});
```

5. memodifikasi fungsi `list()` pada `UserController.php`

```
// Filter data user by level_id
if ($request->level_id) {
    $users->where('level_id', $request->level_id);
}
```

6. Jalankan aplikasi dan uji fitur filtering.
